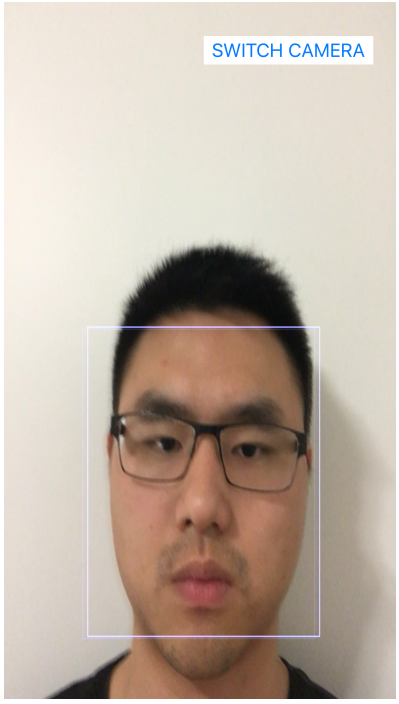
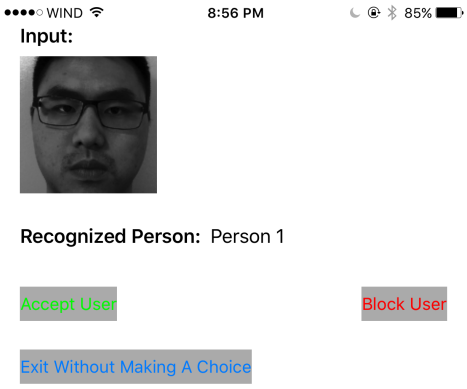
This document is to let the user understand the flow of the software after a fresh install.

1) Open the application using front facing camera. Tap the face of the user.

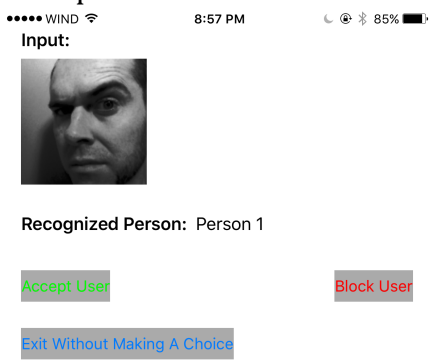


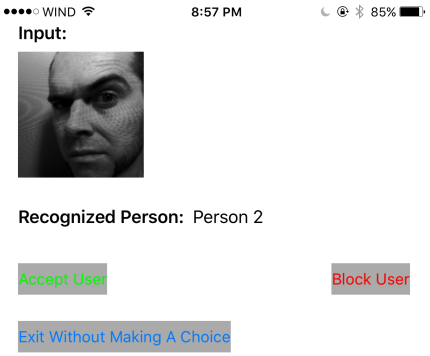
2) User is given the option to click “Accept User”, “Block User”, or exit without doing anything.

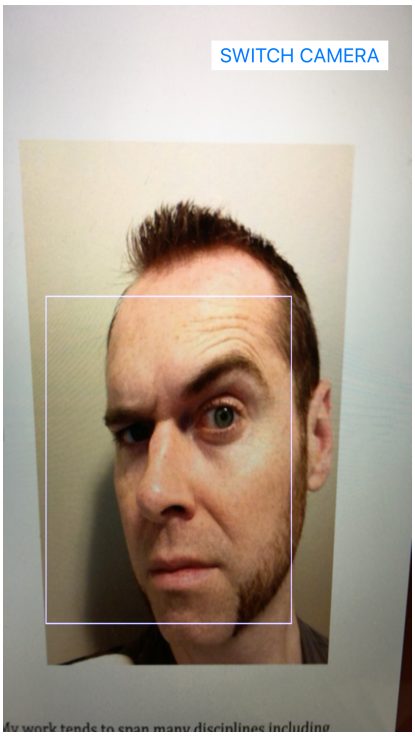


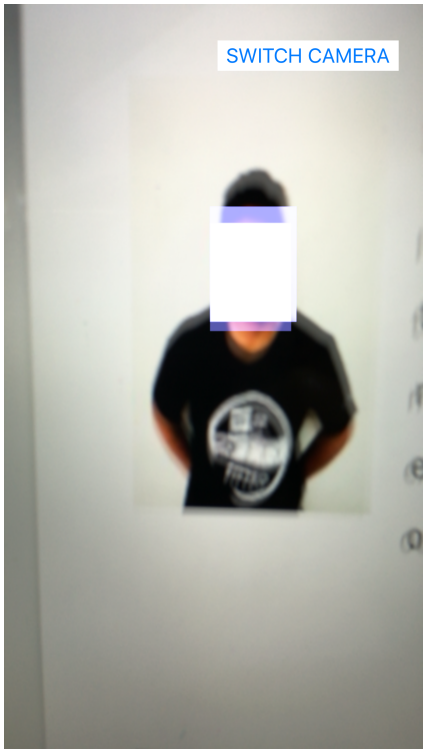
This document is to let the user understand the flow of the software after a fresh install.

3) Sometimes the machine learning will be incorrect. As you can see the recognized person 1 is not the same person in the image. You will need to block the user. If you want to add this person you can click on the face again and the machine learning software will give this person a new ID (Right picture). The user can than click on "Accept User".









4) The face will be unblocked. However the rest of other faces are blocked.
